It is designed and manufactured with strict standards, which assure that it can work under the temperature ranging from -50°C to 70°C , the welding angle is high tensile strength, the anti-uv aging is up to 6000h, the life time is more than 30 years.

WHAT IS ROHS ?

Restriction of Hazardous Substances

(Lead, Cadmium, Mercury, Hexavalent Chromium, PBB, DEHP, BBP, DBP, DIBP & PBDE) Now your uPVC DOORS & WINDOWS are 100% environment friendly Live Healthy live more with Venesta Eco Friendly uPVC profile.

ADVANTAGES OF UPVC WINDOWS & DOORS PROFILE

Thermal Insulation and Energy Efficient

UPVC window and door profile has a low thermal conductive, which can reduce the loss of energy. They are designed with multichambers which also reduce the transmission of heat.

Fire Resistance

UPVC material used in windows and doors are difficult to ignite and do not support or enhance accidental fires unlike their timber counterparts.

Sound Insulation

The multi-chambers, welded corners and tight seals offer excellent sound insulation.

Strength and Security

ALL main U PVC profiles are reinforced with steel, providing a high level of security.

Water Tightness

UPVC windows and doors profile absorbs water below 0.1%. Moreover the uniquely designed weep hole and weather strip in the meeting rail provide water resistance proof.

Maintenance Free

The closed smooth surface of UPVC profiles ensures ease of clean by using gentle household detergent dissolved in water. They are also available with a foil coating in different colors, so you do not need to paint it.

Weather Resistance

UPVC windows and doors are exposed in scorching sun, storms, dryness, high humidity or other extreme weather change. They do not rot, corrode nor warp.

Corrosion Resistance

UPVC windows and doors profile is free from the attack of acids, alkalis, waster gases and salts.

Electricity Insulation

UPVC windows and doors profile has high electricity insulation.

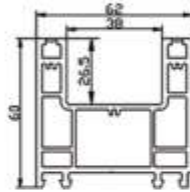

Environmental Friendly

UPVC windows and doors can be fully recycled.
